Types of CBD		
		
Full-spectrum This extract contains most of the cannabinoids and terpenes, this version is minimally refined.	Broad-spectrum This is the same extract as full spectrum, but an additional step has been done to distill out THC.	Isolate Isolate means that only the CBD molecules have been distilled out of the full-spectrum extract.

FAQ

Does CBD oil get you 'high'?

CBD oil comes from hemp, and therefore contains a low concentration of THC. It's unlikely to cause psychoactive sensations, the so-called "high" effect. However, CBD products may show up in a drug test due to THC traces.

Is CBD natural and/or suitable for vegans?

Yes, CBD is a 100% naturally-occurring compound that comes directly from the cannabis plant, which means it's also suitable for vegans.

How is CBD isolated from the cannabis plant?

There are several ways, but we use CO2 extraction because it leaves practically zero traces of chemical contaminants in the end product.
